#### **Detailed Action**

1. The following communication is in response to an RCE filed 12/30/2009.

#### **Status of Claims**

2. Claims 1, 2, and 37 are currently amended.
3. Claims 3-8, 10-14, 35, 36, 38, and 39 are previously presented.
4. Claim 9 is original.
5. Claims 1-14 and 35-39 are currently pending.

#### **Reasons for Allowance**

The closest prior art that the examiner has been able to locate is Ram et al, U.S. PG-Pub 2006/0069635. Ram provides methods and systems for trading stock in an organized trading interface. The method, given in Ram, established a price and a quantity of an item that a user would like to buy or sell. A user interface was used to create the request for buying and selling. A moveable icon would be placed on the interface to indicate the price the user wished to either buy or sell the item at.

While Ram is similar to the instant application in many aspects, there are clear patentable distinctions. Initially, Ram does not teach receiving an actual event value, but rather prices and quantities from an exchange.

Secondly, Ram does not teach a news data feed which provides an actual event value for a news event that affects a market related to a tradeable object. The current application allows for a user to determine an estimate for a financial or news event,

defined in the specification, and create a trading rule based on the actual event value in relation to the estimated value. Ram simply teaches based on receiving values of securities.

Examiner would like to note that no art was found which contained a computer system which allowed for trading of items based on estimated event values and actual event values that do not originate from sources other than an exchange. Examiner reviewed the claims in view of actual event values being GDP announcements, employment numbers and similar economic news. Examiner believes the wordings of the claims, viewed in relation to the specification are clearly directed to such announcements.

**The following is a formal statement of reasons for allowance:**

Claims 1 and 2 are allowed because the best prior art of record, Ram, alone or in combination, neither discloses nor fairly suggest the limitations, in a method, and associated computer readable medium with instruction encoded thereon, for event-based trading, the method comprising:

*receiving by a computer device a news data feed originating from a source other than an exchange, wherein the news data feed provides an actual event value for a news event that affects a market related to a tradeable object;*

*receiving by the computer device an estimated event value for the news event prior to announcement of the actual event value;*

*defining by the computer device a first trading strategy comprising a first plurality of trading rules to be executed based on a comparison of the estimated event value to the actual event value;*

*receiving by the computer device the actual event value subsequent to receiving the estimated event value and defining the first trading strategy;*

*selecting by the computer device a trading rule of the first plurality of trading rules corresponding to the first trading strategy based on a comparison of the actual event value to the estimated event value; and*

*executing by the computer device the selected trading rule, wherein executing*

*the selected trading rule comprises generating a transaction message to be sent to the exchange.*

Claims 3-14 and 35-39 are also allowable for the same reason discussed above, in that they are dependent on allowed Claims 1-44. As a final matter any comments considered necessary by Applicant must be submitted no later than the payment of the issue fee and; to avoid processing delays, should preferably accompany the issue fee. Such submission should be clearly labeled "Comments on Statement of Reasons for Allowance."
